MESSAGE

Message from the ICACt2007 General Chairman and Organizing Chairman!

On behalf of the ICACt2007 Organization and Operation Committee, we extend our warm welcome to the professionals in the field of communications from all over the world present at this grand meeting, namely International Conference on Advanced Communication Technology 2007. The ICACt2007, the 9th of the series conference, is a series of international academic event in the communications field, which all the experts from home and abroad gather to present their work, and share new ideas and visions for achieving the future info-communication age. We hope that you will enjoy both the excellent technical content and recreational parts of the meeting.

Info-communication network is emerging into IP-based convergence services such as VoIP, IPTV, and Fixed and Mobile Convergence (FMC) which are in line with the conference theme “Toward Network Innovation beyond Evolution.” No one can deny that technology has already permeated diverse aspects of human life. Innovative network evolution will make it possible to connect whoever and wherever by guaranteeing QoS provisioning broadband multimedia services. By sharing new idea on network innovation beyond evolution, ICACt2007 will give an excellent opportunity to experience the most advanced IT technology around the world.

In closing, we would like to express our sincere appreciation for the committee members and the referees for their contributions who have been helping us to prepare the event. We also sincerely thank all the authors for the papers on their precious technical achievements. We have no doubt of successful ICACt2007, and you will enjoy both the high technical talks of the sessions and the beautiful landscapes of Phoenix Park.

We look forward to seeing you on February 12-14, 2007 at Phoenix Park, Korea.

MESSAGE

Message from the Technical Program Committee Chair

I would like to welcome to ICACT2007! It is a great pleasure to host this 9th ICACT2007 in Korea which is one of the countries recently drawing much attention in the world arena of Broadband Internet. ICACT is an IEEE-sponsored annual conference providing an open forum for researchers, engineers, policy makers, network planners, and service providers in telecommunications. Extensive exchange of information will be provided on newly emerging systems, standards, regulations, services, and variety of applications in the area of telecommunications.

Korea has richly benefited from deploying the high-speed Internet and Cellular networks providing various IT services all over the country. Approximately 87%, i.e. 14 millions, of Korean households use the high-speed Internet services, and 83%, i.e. 40 millions, of Korean people use the CDMA mobile phones now. The International Telecommunications Union (ITU) announced that Korea topped the list of countries in the Digital Opportunities Index (DOI).

In Korea, the Ministry of Information and Communications (MIC) drew up the IT839 Strategy in February, 2004, and upgraded it to u-IT839 in February, 2006 which includes 8 Services, 3 Infrastructures, and 9 New Growth Engines. 8 Services are HSDPA/W-CDMA, WiBro, Broadband Convergence (IPTV), DMB/DTV, u-Home, Telematics/LBS, RFID/USN Application, and IT Services. 3 Infrastructures are Broadband convergence Network (BcN), Ubiquitous Sensor Network (USN), and Soft Infraware. 9 New Growth Engines are Mobile Communications/Telematics Devices, Broadband/Home Network Devices, Digital TV/Broadcasting Devices, Next-Generation Computing/Peripheral Devices, Intelligent Service Robot, IT System-on-Chip (SoC), RFID/USN Devices, Embedded Software, and Digital Contents/Software Solutions. With a goal to develop a new virtuous cycle, the MIC has been introducing 8 new services for prompting investment into 3 essential networks, which will be the highways for 9 new sectors to grow fast. In the year 2006, Korea launched WiBro and HSDPA commercial services for the first time in the world.

The theme of ICACT2007 is "Toward Network Innovation beyond Evolution." ICACT 2007 consists of 66 technical sessions including 4 poster sessions and an invited session with two remarkable world experts. The TPC carefully selected a limited number of 432 papers from 26 countries to be presented in the technical sessions. We hope these technical sessions will help you obtain better insights into the latest trends and directions for the increasingly competitive future communications and Internet markets. I am sure there will be an abundance of intelligent debate and information exchange, a look at what is new in the field and technology, and lots there.

Thank you everyone who has contributed to the technical program - the authors, the reviewers, and the technical program committee members for their terrific work in collecting and editing the papers. On behalf of the Technical Program Committee, I wish you a productive and enjoyable conference.

Dr. Hyeong-Ho Lee
ICACT2007 Technical Program Committee Chairman

OBJECTIVES

INVITED SESSION

Invited Session 16:40 ~ 18:00 Feb. 12 (Mon.)

Phoenix Ballroom

Chair : Dr. Hyeong-Ho Lee (ICACT2007 TPC Chair)

Keynote Speech 1: Future Internet and GENI

Speaker : Prof. Dae Young KIM
(Professor of Chungnam National University, Korea)

The current Internet is suffering from its fundamental flaws not able to meet to the diverse and disruptive applications requirements. There's emerging motivation to design the network of the future from scratch, i.e., by taking the so-called clean-slate approach, freeing ourselves from every assumption lying under the current Internet. This talk gives a brief introduction to this new research area on this network of the future, aka Future Internet, and the related global deployment activities of GENI, a virtual shared network research environment.

Keynote Speech 2: Challenge and Opportunity of NGI and IPv6: Experiences in China

Speaker : Prof. Jianping WU
(Professor of Computer Science and Director of Network Research Center,
Tsinghua University, China)

Internet has gained great success in the past twenty years, but there are many technology challenges to today's Internet such as scalability (or expansion), high performance of end-to-end transmission, security (or trustiness), real time (or large scale video) transmission and mobile communication over Internet etc. Next Generation Internet (NGI) focus on developing solutions for these challenges and gives us so many opportunities to contribute new technologies and applications. IPv6 provides a large scale of IP address space and makes today's Internet to connect not only computers but also all of electronic devices. It is believe that IPv6 will be a core protocol and play a very important role on the NGI. The project CNGI, China Next Generation Internet, will be introduced and some experiences in the largest backbone network of CNGI, CNGI-CERNET2, will be given such as native IPv6, IPv4 over IPv6 transition and IPv6 source address validation, etc.
